Model 3324QC-300 amp

DESCRIPTION

These ground power units are designed to perform starting, powering up aircraft systems and maintenance functions. When connected to AC power, the depleted batteries can be charged in a matter of hours with the built in power supply/battery charger.

The 3324QC contains a full 24-volt battery bank for starting and a large power supply to provide a continuous current at 28.5 Volts DC for maintenance. This mobile GPU is configured with a 300 amp power supply. This will satisfy the ground power requirements of most business jets, and includes on-board air conditioning and other high draw aircraft systems.

We also custom manufacture Start Pac® units in various combinations of batteries and 28 volt power supplies to meet customers' exact requirements.

SPECIFICATIONS

The Model 3324QC-300 GPU is a combination power supply and battery pack.

Batteries

- 26 amp hour at 10 hour rate
-
